Jose Cardenas

Gilbert, AZ 85233 • (480) 276-7846 • jose@cardenassoftware.com

Senior Full Stack Engineer offering 12+ years experience developing scalable and robust applications. Dedicated to constantly improving tools and infrastructure to maximize productivity, availability and conversions while quickly responding to ever changing business needs.

Skills

- 12+ years experience in object oriented programming - PHP, Javascript, Java, Python
- SQL - MySQL and PostgreSQL
- Python - Django framework with multiple third party software integrations
- System Administration - Linux, Docker, NGINX, AWS, ECS
- Development frameworks - Laravel, Django, React, Vue, NextJs
- JavaScript, React & React Native expert, including server-side JavaScript, Node and NextJs
- Mobile, Desktop and Responsive designs optimized for performance including single page applications
- Requirements analysis, design and implementation development phases
- Team lead and mentor with experience conducting interviews

Experience

Staff Software Engineer - Consumer Edge 2024 - present

Built a new user-facing data platform used to analyze hundreds of billions of consumer transactions to our customers in the finance, private equity, and corporate hohorts. The new platform allows for faster development of analytical dashboards, onboarding of new data sources, and quicker client on-boarding process.

- Designed and implemented new database schemas using Clickhouse to meet architectural requirements.
- Was a primary contributor to the core analytical API that leverages JSON-based domain specific query language for performing unique and emergent queries against our large transaction-level data.
- Contributed to React based front-end platform that integrated with our analytical API and allows sophisticated and open-ended access to our backend platform, facilitating data analysis of our large transaction-level data lakes.
- Designed and implemented data search API functionality using Meilisearch.

Senior Full Stack Engineer - GiddyUp 2022 - 2024

Contributed in building a modern multi-stack platform for e-commerce marketing which allows GiddyUp to support hundreds of brands, improves conversion rate and fulfill thousands of orders a month.

- Python backend API with Django framework and PostgreSQL database including Celery jobs and multiple third party integrations such as Stripe, Paypal, ShipStation, Klaviyo, Avalara
- Vue and React front-end customer facing applications optimized for pagespeed and conversion rate
- PHP with Craft CMS (Yii framework) front-end service to build hundreds of user facing landing pages
- Stripe and Paypal integrations for international and domestic transactions including third party payment methods, pay later and recurring payments.
- Domain-driven architecture design and implementation to support complex legacy business needs as well as new business needs designed to scale business exponentially

Senior Full Stack Engineer - BasketballNews.com 2019 - 2022

Designed, built and deployed React Native mobile app to app stores and web. Including custom content management software built on React and RESTful API using Laravel PHP framework.

- AWS - Elastic Container Service deployment & architecture
- PostgreSQL relational database designed to support millions of rows of NBA statistics
- PHP - Laravel API with third party NBA statistics API integrations and Redis cache
- React Native - iOS and Android apps, using NextJS for single page web application with server side rendering for optimized SEO.
- React - custom content management system used by writers and editors to write and publish content
- Designed and implemented content search using Elasticsearch

Senior Full Stack Engineer - 3 Wishes LLC - Part-time 2020 - 2022

Built and maintained multiple eCommerce shops using WooCommerce and Shopify including custom functionality and API integrations.

- Designed and implemented eCommerce templates for WooCommerce and Shopify platforms
- Created custom WordPress plugins for eCommerce content management and speed optimization.
- Orchestrated and accomplished mass migration from BigCommerce to WooCommerce platforms and deployed on AWS with containerized WordPress deployment using ECS.

Senior Full Stack Engineer - Allbound.com 2018 - 2020

Work in a start-up SaaS environment on business to business partner relationship management software. AWS architecture using Laravel API, React and Wordpress. Worked on maintaining, improving, and planning and executing software updates for current products.

- WordPress user-facing application with custom plugins using React to supplement user experience.
- React front-end tools for multi-tenant business to business content and relationship management.
- Laravel based API with multi-tenancy, securely facilitating communication with MySQL, ElasticSearch and MongoDB data stores with Redis cache.
- AWS architecture with Docker containers using ECS to enable scaling and microservices
- Designed and implemented multi-tenant database architecture to support hundreds of clients deployed across multiple services accounting for GDPR compliance

Full Stack Engineer - Yandy.com 2013 to 2018

Worked in improving legacy infrastructure and developing new software and architecture in a fast paced, high demand eCommerce environment. Heavily involved in the entire process of running a custom eCommerce platform including project planning, UI design, API, front-end and back-end development for customer facing production software as well as employee facing administrative software.

- Full Stack development (PHP, Javascript, JQuery, PostgreSQL and Linux)
- Designed and built a proprietary eCommerce platform that enabled millions of dollars in revenue.
- Designed and maintained warehouse shipping software that allowed warehouse employees to to pull, pack and ship thousands of orders per day optimized for speed and accuracy.
- Successfully migrated legacy PHP front-end application to Laravel framework
- Implemented product search using ElasticSearch for an 80k+ products and collections.
- Used Redis cache & session management to facilitate multi-server architecture
- Email marketing software queueing and sending emails to more than 2 million subscribers

Education

Arizona State University (Ira Fulton School of Engineering)
B.S.E in Computer Systems Engineering
